

LEED[®] for Construction

LEED[®] Canada-NC (New Construction) and LEED[®] Canada-CI (Commercial Interiors) are comprehensive, voluntary, market-driven green building rating systems. They evaluate performance on a range of ecological and human health issues from a whole building perspective, providing a definitive benchmark for what constitutes a 'green building.'

LEED certification is fast joining the lexicon of attributes that differentiates projects in the marketplace for owners, tenants, and the growing number of communities now including sustainability in their current and future planning. With a solid understanding of the certification process, contractors will be able to plan and respond to this growing demand and meet client expectations by reducing the risk of errors, deficiencies, and project over-runs.

This ½ day seminar introduces the LEED Rating System and sustainable design issues that affect general and trade contractors, manufacturers and suppliers. It provides tips on construction waste management, commissioning green buildings, managing a sustainable construction site and what materials to choose and why.

*Participants will receive the Green Construction Manual (with practical forms for the job site).

What will you learn?

- How LEED affects your work, and the business opportunities it creates.
- Roles of builders working on LEED projects
- What LEED points affect Contractors
- Which Construction Index Divisions are likely to have LEED implications
- How to use the LEED Letter Template

Who should attend?

- Senior Construction Management
- Project Managers/Coordinators
- Product manufacturers/Suppliers
- Estimators for General and Trade Contractors
- Procurement Managers
- Sub-contractors
- Architects
- Building consultants

*Building with purpose
Bien bâtir pour l'avenir*
