

LEED® Canada for Homes Program Review Workshop

LEED® Canada for Homes is a comprehensive, voluntary, market-driven green building rating system for residential construction. It is based on the USGBC's LEED® for Homes rating system and it evaluates performance on a range of ecological and human health issues from a whole home perspective, providing a definitive benchmark for what constitutes 'a green home.'

LEED® Canada for Homes recognizes homes that incorporate design and construction practices that combine healthy, high quality and high-performance systems and materials with reduced environmental impacts. Understanding LEED® Canada for Homes is an important step towards reducing environmental impacts and achieving superior economic performance in home construction. This intensive, one-day workshop provides a program overview of LEED Canada for Homes.

What will you learn?

- o An understanding of green-home design benefits and strategies.
- o Knowledge of how and when to use the LEED® Canada for Homes rating system.
- o Information about green building resources to use in your projects.
- o New skills and insights for leveraging green design and LEED® Canada for Homes into your practice.
- o Ability to reposition and differentiate yourself in the marketplace.
- o Solid introduction of the system and the different model that is LEED® Canada for Homes.

Who should attend?

- Home Builders
- Interior Designers
- Contractors
- Architects
- Project Managers
- Developers
- Product manufacturers
- Real estate managers, owners & tenants
